## ABOUT THIS FORUM

Picking up where RMS left off, ASCP has liberated and extended a list of concrete pavement major projects to an online environment for access and editing. Project records extend as far back as 1975 and record key attributes of each project, such as type, contractor, year open and length. **Justin Moss** will provide a preview of future availability, editing and reporting.

Martha Cove Boatyard has a 3,000sqm concrete hardstand area which will accommodate vehicular traffic carrying loads in excess of 70 tonnes. Details of the 20mm PD3™ Plate Dowel Cradle which provided a total contraction joint system solution will be presented by **Kate Storer**. Such dowel cradles are suitable for shipping port and airport facilities.

Presentations by Hanson, Holcim and Boral will look at the challenges, logistics and outcomes related to supplying large concrete volumes on major road infrastructure projects.

The placement of vehicle detector loops in continuously reinforced concrete pavements provides a challenge. In this presentation, **Eduardo Alcazar** will look at how it was done on the WestConnex New M5 project.

**David Hocking** is chair of the CCAA Australian Concrete Technical Committee and will discuss matters related to industry support currently on this committee's agenda.

The presentation on curing compounds by **Steve Latham** will detail the types of curing compounds for concrete pavements, the importance of solids in the curing compounds, and the next generation of resin curing membranes.

The **ASCP 12<sup>th</sup> Annual General Meeting** will be held during this Forum, immediately after lunch. Members and non-members of ASCP are invited to attend.
